

Project funded in the frame of the operational programme “Competence Centres”, of The Technology Agency of the Czech Republic supporting the development of long-term cooperation in research, development and innovation between the public and private sectors.

**ALTERBIO TE02000006**

Duration: 01/2014-12/2019

***Centre for alternative environment friendly high effective polymer antimicrobial agents for industrial applications***

R&D and proposed commercialization of innovative antimicrobial systems for plastics, coatings, cosmetics and textiles. Antimicrobial agents will be strongly attached to polymeric systems, so that they will only protect the surface of the material without effect on the environment. This way, a long-term protection of treated materials against the use of microbial attack will be achieved without undesirable health and ecological effects.
